For immediate release.

FixerBundle 1.3 Photoshop Plug-ins for Windows XP

The FixerBundle version 1.3 for Windows XP now contains:

- FocusFixer 1.4
- NoiseFixer 1.2
- ShadowFixer 1.2
- TrueBlur 1.1

FocusFixer 1.4 is a professional pre-sharpening tool. It reverses the softness due to even the best digital SLR cameras. This update adds various improvements and extends the range of cameras in the LensFIT set.

NoiseFixer 1.2 removes noise from colour and grey components of digital images. Minor changes.

ShadowFixer 1.2 lightens regions of under-exposed images. Minor changes.

TrueBlur 1.1 will creatively soften an image as an out-of-focus camera would. TrueBlur now also uses LensFIT data to creatively and accurately blur images modeling the blur of the lens and camera used to take the photograph.

There are various minor bug fixes and improvements to the user interface and now all of our PC plug-ins work with Adobe Photoshop 7, Photoshop CS, and Photoshop CS2.

The FixerBundle is available from FixerLabs (www.fixerlabs.com) as an electronic download or in Europe on CD from Colour Confidence (www.colourconfidence.com).
