

FixerLabs Releases FixerBundle V2 Plug-ins for Photoshop

FixerLabs has released the FixerBundle V2 suite of Photoshop plug-ins for Windows and a beta for Mac OS X. Included in the new features and functions is an automatic deblur in FocusFixer V2.

Watford, UK ([PRWEB](#)) September 24 2008 -- [FixerLabs](#) has announced the release of version two of its suite of Photoshop image enhancement plug-ins, FixerBundle V2, consisting of FocusFixer V2, NoiseFixer V2, ShadowFixer V2 and TrueBlur V2.

Included are many new features to aid workflow (automation, "Smart filters", layers, and resizable previews) and radical changes to the capabilities of FocusFixer V2.

FocusFixer V2, their flagship pre-sharpening and focus restoration plug-in, now includes automatic deblur. This innovative implementation of blind deconvolution guides users to a perfect result everytime and is an enabling technology for batch processing of digital photographs.

"Every user request for features and functionality has been included in the V2 release of our Photoshop plug-ins" said Tim Atherton, FixerLabs' Technical Director, "and the automatic deblur in FocusFixer V2 is the most sophisticated technology we have ever released".

"I use a Hasselblad H3DII and FocusFixer V2 with CS3 on every image," said Kurt Reynolds, a California-based photographer. "Its' amazing how much time this saves and how much more detail you end up with using FocusFixer."

Pricing and availability

[FixerBundle V2](#) is available now for Windows priced at \$99.95 (with an upgrade price of \$49.97 for existing FixerBundle customers). There is a free 30-day trial for Windows users and a 60-day beta for Mac OS X users.

FixerLabs was founded in 2003 with the aim of transferring research technology into innovative products for digital photographers. FixerLabs has a history of industry milestones, deconvolution and LensFIT technology in FocusFixer, super-resolution in SizeFixer and now blind deconvolution in FocusFixer V2.
