

FixerLabs, Watford, UK. 1, June 2007

For immediate release.

SizeFixer full function trial now available.

FixerLabs, developers of award winning software for digital image enhancement and enlargement, today released a full function trial version of their flagship programme for image enlargement - SizeFixer. (Initially available only for Windows with support for Mac due soon.) Based on their patented Super-Resolution technology, SizeFixer XL can enlarge images to A0 size and beyond with unprecedented levels of quality. SizeFixer is a stand-alone 'upsizing' tool for Photographers and Graphic Designers who demand the very best quality and features unique support for many of the very latest cameras using its LensFIT technology. Ideal for creating photo enlargements to submit to stock image libraries such as Alamy and Getty Images.

"I have personally tried SizeFixer XL and was astonished at the results. This is far superior to other products on the market for resizing images."

Stan Ashbrook, Review Editor for the Photographic Society of America Journal

Key features include:

- Enlarge images without loss of sharpness
- Multi-level tools for preserving fine detail & edges
- World-first use of Super-resolution technology
 - Sharper upsized images
 - Improved contrast and fine detail
 - Excellent tonality
- 8-bit and 16-bit images
- Includes LensFIT Release 7.0
- RGB, JPEG & TIFF

SizeFixer SLR & XL are available to download or on CD direct from FixerLabs (www.fixerlabs.com) or from most specialist retail outlets.
