SizeFixer receives top award from Macworld

The latest edition of the top selling magazine Macworld features a review of FixerLabs latest upsizing solution, **SizeFixer** and give it an Editors' Choice award with 4.5 stars out of 5. In his review Vic Lennard writes:

*"There are a number of Photoshop plug-ins, ..., that enlarge images and post-process them to enhance sharpness and edge contrast. The results are good but still not marvellous when printed out from a high-quality large-format inkjet printer. Can **SizeFixer** do a better job? In our test, shots from a Sony DSC-F828 8-megapixel camera were blown up to A3 and printed on an Epson Stylus Photo 1280, along with similar enlargements using other methods. **SizeFixer's** results were **amazing** with an incredible level of detail. Even **more impressive** were the cropped results, effectively enlarging to A2 and even A1."*

Read Vic Lennard's full review in Macworld.
