Of interest to editors and journalists covering: Consumer, serious amateur and professional photography, graphics design and large format photo printing.

FIXERLABS RELEASES SIZEFIXER XL AS A UNIVERSAL BINARY FOR MAC OS X

Stunning upsized photographs and now five times faster.

LONDON, UK - 2nd April 2008 -- FixerLabs Ltd. ([www.fixerlabs.com](http://www.fixerlabs.com)) has announced the availability of SizeFixer XL 1.3 for Apple's OS X as a Universal Binary. SizeFixer XL now upsizes digital photographs with impeccable quality and is 500% faster on Intel-based Macs compared with the previous PowerPC version.

"The universal binary of SizeFixer XL delivers stunning results at speeds that have 'wow-ed' photographers in our beta test program," said Tim Atherton, FixerLabs' Technical Director. "Best of all, SizeFixer XL is now available as a free 30-day trial so that users can see the results for themselves."

"The new SizeFixer XL is much (and I mean much, much, much) faster than the old version (on my MacBook Pro)," said award-winning Australian photographer Brian Cassey. "The big shock was how much better the new SizeFixer XL is than my other upsizing software. The quality of files increased in size by SizeFixer XL are far better and SizeFixer is so much easier to use."

Pricing and availability

-----  
SizeFixer XL 1.3 is available as a free update to current SizeFixer XL users and as a free 30-day trial. Full system requirements and more information on SizeFixer can be found at [www.fixerlabs.com](http://www.fixerlabs.com).

FixerLabs was founded in 2003 with the aim of transferring results from academic research into innovative products that photographers will benefit from. SizeFixer was launched in 2004 as the first commercial product to use super-resolution technology for upsizing digital photographs.
